Orlando, FL 32826 | (954) 907-1821 | se842554@ucf.edu | www.linkedin.com/in/slalq

Summary

Computer Engineering graduate from UCF with three years of support experience at Webcourses@UCF. Familiar in Java, Python, and C, with the ability to translate technical concepts for non-technical stakeholders. Experienced in identifying user needs, functional testing of the LMS, troubleshooting, and technical documentation. Seeking a business/systems analyst role bridging developers, end users, and administrators.

Education

University of Central Florida

M.S. Financial Technology

Bachelor of Science Computer Engineering

Orlando, FL

Expected. Dec. 2027

Aug. 2026

Relevant Experience

OPS Student-Technical Support

CDL Webcourses@UCF

Orlando, FL

Feb. 2023 - Current

- Deliver real-time support through phone, chat, virtual meetings, and in-person walk-ins, assist faculty, staff, and students with varying levels of technical proficiency.
- Troubleshoot and resolve issues within Canvas LMS, documenting findings and escalating complex incidents to higher credential staff or Admins.
- Author technical documentation and step-by-step guides for faculty, staff, and students, enabling users to resolve common issues independently.
- Assist faculty with course creation and management, translating technical concepts clearly for non-technical users.
- Train and mentor new student workers, guiding them through shadowed ticket resolution.

Projects

BESS Thermal Runaway Prevention

Senior Design 1&2

Orlando, FL

Jan. 2026 – Aug. 2026

- Gathered requirements from an industry sponsor and documented technical specifications to guide the project.
- Developed a machine-learning system in Python to detect anomalous battery behavior in real time.
- Helped build a physical testbench and a Raspberry Pi-powered dashboard to record, store, and visualize live sensor data.
- Performed functional testing and troubleshooting to validate the system before delivery.

Java EE Web Application

CNT4714 - Enterprise Computing

Orlando, FL

Jan. 2026- May. 2026

- Built a web-based application in Java (Servlets/JSP) with four distinct user roles, each with its own access level and interface
- Implemented an authentication servlet that validates logins and routes users to role-specific pages.
- Connected the application to a MySQL database via JDBC, using a dedicated database-utility class to manage connections and dynamically generate HTML tables from query results.
- Configured per-role database access through separate properties files, deploying and testing the application on Apache Tomcat.

Portfolio Development Project

Mentee- Mentorship with LS&T department at CDL

Orlando, FL

Apr. 2025 – Jun. 2025

- Collaborated with LS&T leadership to design and build a responsive personal portfolio website using HTML and CSS.
- Gained hands-on front-end development experience, including iterative design, layout debugging, and planning for site scalability.
